

# MANDEXING

- Replaced 7 hours of AUTOTOOLS HELL with 10 minutes of MESON to create a build system (recommendation from Tom W)
- Discovered Ubuntu-specific compile instructions (thanks to James P for installing it)
- Thanks to Simon Billinge for advice on package management.
- Advice from Harry Powell on CUI - added explanatory tooltips.
- Watched James P use the program and observed where the CUI was unclear - added Github issues.
- I think you'll find that Nick P. provided a diffraction pattern to 1.4 Å resolution to demonstrate the Mandexing.
